TECHNOPROM-2025:

"Science, Personnel, Industry: Key Components of Technological Leadership"

TECHNOPROM

RUSSIAN
SCIENCE AND TECHNOLOGY
WEEK

FORUM GOAL

Organize a broad discussion of a set of measures to ensure a technological breakthrough: accelerated implementation of scientific research results in the economy, staffing of priority industries, increased investment in science by the state and business, and the involvement of talented young people in scientific, scientific-technological and innovative activities.

FORUM MISSION

Creation of a platform where representatives of regions, enterprises, scientific and educational organizations, development institutes, federal executive authorities with the participation of colleagues from partner countries will be able to discuss issues of scientific and technological development of the country, build interregional and international cooperation chains to achieve technological leadership using specific projects, cases, and technological developments as examples.

FORUM OBJECTIVES

-  Consider the possibilities of regions' participation in the implementation of the activities of the Unified Plan for Achieving the National Goal "Technological Leadership".
-  Organize a presentation and discussion of national projects of technological leadership with the involvement of the main participants-implementers of national projects and interested regions.
-  Consider possible forms of integration of research and development and production and technological activities proposed by regions, state corporations, scientific organizations, universities and other entities in order to determine the most promising ones.
-  Consider possible forms (models, plans...) of training personnel for the implementation of national projects of technological leadership proposed by regions, state corporations, scientific and educational organizations and other entities. (Discussion of the issue - how regions are included in the implementation of the activities of the "Strategy for the Development of the Education System in the Russian Federation for the Period up to 2036 with a Prospect up to 2040"). Present models of organizing scientific and technological education for children and youth.
-  Continue the exchange of experience in organizing the management of scientific and technological development of regions, organize an extended meeting of the interdepartmental working group on the implementation and development of the institute of managers responsible for the scientific and technological revolution of regions (under the leadership of L.S. Gumerova) (discussion of the issue "Comprehensive state programs for scientific and technological development of regions - synchronization of indicators of programs and national projects to achieve technological sovereignty").
-  Ensure the involvement of partners from friendly countries in cooperation in the scientific, educational and scientific and technological spheres, facilitate the conclusion of agreements, as well as the development of international trade and economic relations.
